Jackson County Community Justice Juvenile Division

Juvenile Crime Prevention Risk Assessments Eleven Year Data Trend Reports

SUMMARY

Information on Jackson County juvenile offenders was collected, entered and maintained in the Juvenile Justice Information System (JJIS). JJIS is a state-wide electronic case management system used by all counties in the state of Oregon and maintained by the Oregon Youth Authority.

Items to consider when reviewing data:

Small changes in raw numbers between years may create large percentages. For example, a change from 6 to 2 creates a change of 67%. Review both the raw numbers and percentages to determine the significant of these. Reported risk assessments have benefits and limitations.

SUMMARY

The total number of assessments being completed corresponds with the overall number of youth being referred to the department for criminal offenses or that are on probation. Over the previous three years the percentages of low, medium and high risk youth has been fairly consistent, however over the last two years there has been a 21% (92) reduction for initial assessments. The previous year the majority of youth receiving an initial risk assessment are low risk (46%). Medium risk followed with 29% and 25% for high risk. Youth that go onto formal probation show the majority as medium risk (50%) on re-assessments that are conducted every six months.

Initial risk assessments have consistently shown that peer/other relationships, behavior issues, family issues and school issues are the top areas of concern with youth referred to the department.

Re-Assessments have also shown that peer/other relationships, behavior issues, family issues and substance abuse are the top areas of concern, with each being 80% or higher.
