Totals by Referrals and Youth

Summary

Information on Jackson County juvenile offenders was collected, entered and maintained in the Juvenile Justice Information System (JJIS). JJIS is a state-wide electronic case management system used by all counties in the state of Oregon and maintained by the Oregon Youth Authority.

Statistical information for this this past year may not represent accurate historical data due to the COVID-19 epidemic as police reports/referrals and overall service delivery was reduced dramatically or eliminated during this period of time.

Items to consider when reviewing data:

Small changes in raw numbers between years may create large percentages. For example, a change from 6 to 2 creates a change of 67%. Review both the raw numbers and percentages to determine the significant of these changes. Data in this report represents crimes that have a corresponding referral to the Community Justice Juvenile Division Services which is the juvenile justice provider in the county.

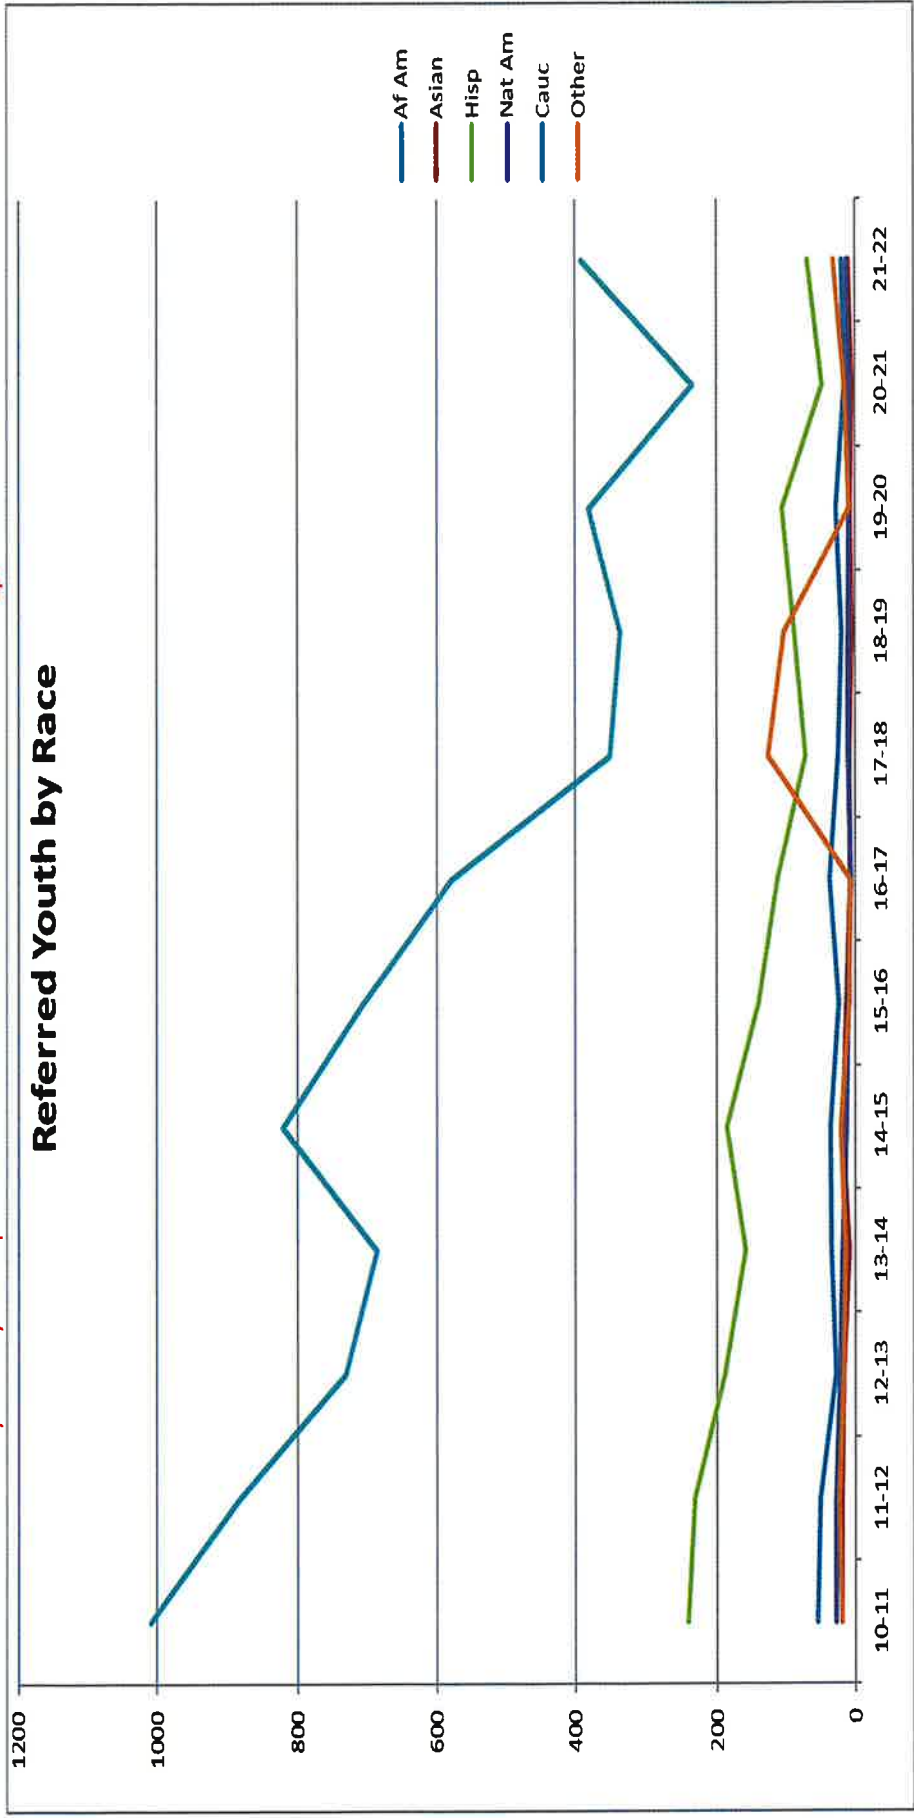

If a juvenile crime occurred that was not reported, or law enforcement did not create a referral regarding the crime, it is not included in this data.

SUMMARY

This past year showed a drastic increase in the total number of referrals (police reports) and youth referred to the juvenile division but this was after a drastic decrease in both caused by the COVID-19 pandemic. After seeing a slight increase the previous year of 3%, this past year showed a 60% reduction in referrals and 40% reduction in youth referred. Trends will need to continue to be monitored to determine if this was due solely by the COVID-19 pandemic or a continued reduction in youth referrals. The total number of referrals by gender continues to narrow and over the last year 66% of referrals were male and 33% were female. Over the last year, youth 12 years of age and under showed an increase of 16%, youth 13-15 years of age a 7% increase, and youth 16 and older a 32% reduction compared to 2017-2018. Asian (50% / 5), Native American (16% / 2) and Caucasian (15% / 56) youth all showed an increase from Pre-COVID 2018-2019 year.
