## Johnson & Johnson Vaccine Available at the Jackson County Vaccination Equity Center at the Expo

The Johnson & Johnson vaccine is now available at the Jackson County Vaccination Equity Center located at the Expo. This is a one-time COVID-19 vaccine and is FDA approved for individuals 18 and older. Appointments are not required, but people can schedule an appointment at [JacksonCounty.org/GetVaccinated](https://JacksonCounty.org/GetVaccinated) or call 211.

All COVID-19 vaccines at the Vaccination Equity Center are free, and people do not need to bring ID or insurance information. The Vaccination Equity Center is a safe place, accessible to all, regardless of legal status. Language interpreters and support for disabilities are available.

### Vaccination Options at the Jackson County Vaccination Equity Center:

- **Walk-through Moderna Site now includes Johnson & Johnson vaccine (for individuals 18 years and older)**
  - Vaccine: Moderna and Johnson & Johnson
  - Operation Hours: Monday-Friday 9:00 a.m. to 12:00 p.m. and 1:00 p.m. to 6:00 p.m.
- **Drive-Through Pfizer Site (for individuals 12 years and older)**
  - Vaccine: Pfizer
  - Operation Hours: Sunday- Saturday
    - Wednesday and Thursday: 7:00 a.m. - 2:00 p.m.
    - All other days: 12:00 p.m. - 7:00 p.m.

## Myocarditis or Pericarditis After COVID-19 Vaccination

The Centers for Disease Control and Prevention (CDC) and the Oregon Health Authority (OHA) are aware of reports of myocarditis following COVID-19 vaccination. In response, OHA asks that health care providers do the following:

- Consider a diagnosis of myocarditis or pericarditis in any evaluation of chest pain following COVID-19 vaccination.
- Inquire about recent COVID-19 vaccination in any patient presenting with symptoms consistent with myocarditis or pericarditis (chest pain or pressure, or shortness of breath, EKG abnormalities).
- Report such cases promptly to the U.S. Vaccine Adverse Events Reporting System (VAERS: <https://vaers.hhs.gov/reportevent.html>). It is recommended that the evaluating (not administering) provider report the incident to VAERS so that appropriate clinical details can be reported accurately.

Please print the  
Reporting  
Guidelines

- Report any cases that meet the criteria above to OHA in addition to VAERS; OHA can help with any details needed for reporting.

Oregon Health Authority is aware of at least six cases of myocarditis in Washington and Oregon following COVID-19 vaccination, including cases in adolescents. To support ongoing monitoring for this potential adverse event, the Oregon Health Authority asks that providers evaluate for myocarditis or pericarditis following vaccination and report any such cases promptly to VAERS. Providers are asked to report any cases with symptoms within the two weeks following vaccination, including first and second doses of vaccine.

Clinical features of myocarditis and pericarditis include chest pain or pressure, shortness of breath, electrocardiogram (EKG) changes, and elevated cardiac biomarkers. Providers should elicit a detailed history, including vaccination status and potential exposures to COVID-19. Patients should be tested for COVID-19 infection using a molecular (PCR) test.

Common side effects after receiving the COVID-19 vaccines include soreness at the injection site, fatigue, and headache. Less common side effects include muscle aches, chills, joint pain, vomiting, and fever. Most symptoms resolve after a day or two.
